Multi-factor authentication with digital certificates

"By 2023, 73% of security failures will result from inadequate management of identities, access and privileges, up from 50% in 2020" Gartner®

Introducing Soliton OneGate

Streamlining user identities and ensure secure, unified, password-free authentication

Secure Access via X.509 Certificate

Access to Soliton OneGate is facilitated through mTLS using digital certificates, enhancing security. With the private tenant you own and control the dedicated Certificate Authority (CA).

Federation and Cloud Service Provisioning

Soliton OneGate can federate and provision cloud services, streamlining access while maintaining robust authentication.

Integrated Network Access Control

Soliton OneGate seamlessly integrates with Network Access Control (NAC) in company networks, granting secure access to Wired, Wi-Fi, and VPN networks.

Soliton OneGate offers a managed cloud service where customers have their own private and disconnected tenant.

Unlocking Secure Access

The Soliton OneGate advantage empowers organisations, by providing diverse strategies enhancing secure usability

Invisible User Certificates

Soliton OneGate enables simple certificate revocation for enhanced security. Using short-lived client certificates ensures automatic revocation of user access upon expiration.

Password-Free Convenience

Integrating client certificates, alongside options like FIDO2, elevates security by offering multi-factor authentication without relying on passwords.

Effortless Mobility

Opting for an authenticator app in tandem with a client certificate for login offers an alternative to FIDO, maintaining password-free security while accommodating users who may have limitations with FIDO technology.
